Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Purpose / Vision: To give employees one centralised ServiceNow portal where workplace / IT issues can be raised through a structured form and captured as trackable Employee Issue records.

1. CUSTOMER SEGMENT(S) Primary: employees of an organisation who face workplace / IT issues (network, software, hardware, access) and need to report them. Secondary: support team members / administrators who track and manage the resulting Employee Issue records in ServiceNow.	4. CUSTOMER CONSTRAINTS - Employees are not always technical, so they may not know how to classify an issue. - Limited time – an issue interrupts their work. - A web browser and network access are needed to reach the Employee Center portal. - The solution has to fit within the ServiceNow platform (demonstrated on instance dev402796).	5. AVAILABLE SOLUTIONS Typical alternatives to a portal-based form: Email / phone / verbal report to IT or a manager – quick, but unstructured, hard to track, easy to lose. Internal chat messages – fast, but no dedicated record or fixed categories. General ticketing forms – structured, but not tailored to this project's Category / Subcategory / State fields.
2. JOBS-TO-BE-DONE / PROBLEMS Jobs to be done - Report a workplace / IT issue quickly from one place. - Describe it in a consistent format (Requester, Category, Subcategory, State, Short Description). - Get the issue recorded so it can be followed up. Problems: reports scattered across channels, missing details, no central record.	9. PROBLEM ROOT CAUSE - No single, centralised entry point for raising issues. - Free-form reports leave out details such as category or requester. - Without a dedicated record, issues are hard to track and manage. - Employees are unsure which type of issue they are reporting (Network, Software, Hardware, Access).	7. BEHAVIOUR Typical current behaviour: email or call IT / a manager, or message a colleague, then follow up repeatedly for progress. Behaviour with the solution: - Open Employee Center → Raise an Issue → Raise Employee Issue. - Enter Requester, Category, Subcategory, State and Short Description; add an attachment if required. - Submit → an Employee Issue record is created.
3. TRIGGERS - A sudden problem: Wi-Fi not connecting, laptop or server issue, software not working, forgotten password / access problem. - Being unable to continue work. - Seeing the Raise an Issue section on the Employee Center homepage. 4. EMOTIONS: BEFORE / AFTER Before: frustrated, unsure whom to contact, worried about delay. After (intended): reassured and more in control, because submission creates a ticket record (e.g. EMP0001005). Resolution itself is not automated in the current version.	10. YOUR SOLUTION Employee Raise Issue Management System using ServiceNow - implemented components: - Custom ServiceNow application with a custom Employee Raise Issue table. - Record Producer "Raise Employee Issue" whose variables map to table fields (Requester, Category, Subcategory, State, Short Description). - UI policies / dependencies for category / subcategory and field behaviour. - Employee Center-based Service Portal (Search, Raise an Issue, Quick Links, My Action Items, Recommended for You) with a custom Commercial Services widget (HTML, CSS, SCSS). - Submission creates an Employee Issue record (table: EMP0001004). Application committed to GitHub: https://github.com/tryellam12/employee-issue-management-servicenow. Current scope: issue creation and record management. Future enhancement (not implemented): automatic assignment, SLA management, notifications, Flow Designer workflow, automated state transitions, knowledge recommendations, dashboards, approvals, escalation.	6. CHANNELS of BEHAVIOUR 6.1 ONLINE - Employee Center portal: https://dev402796.servicenow.com/employee_request - Search, Raise an Issue, Raise Employee Issue form, attachment (if required), Quick Links, My Action Items. 6.2 OFFLINE - Existing offline channels: phone calls and in-person reports to IT staff or a manager. - The portal is intended to reduce reliance on these channels; it does not integrate with them.
